

Delta Seal 1000 Retractable Dock Shelter

Product Data Sheet 11 / 1

PRODUCT DESCRIPTION

The Enerco Delta Seal 1000 heavy-duty dock shelter model is mounted at the dock height level. Overall dimensions are manufactured to 3500mm wide x 3500mm high x 600mm projection however specific sizes are catered for when required. Standard head curtain drop is 1200mm with 650mm wide side curtains. This uniquely designed shelter will retract in a controlled manner against a reversing vehicle, to suit various widths and heights of vehicles. The vehicles would reverse into the head and side curtains to effect a wipe seal on the head and side of the vehicles.

FRAMES

The main frames are galvanised steel box sections 60mm x 30mm x 1.5mm with a galvanised box section parallel strut mechanism. The curtains will be secured on the three external frame edges by an aluminium angle 25mm x 50mm. The frame will slope from rear to front to assist drainage.

CLADDING

The flexible cladding on the sides and roof will be heavy-duty 600gm m² black PVC/polyester material. A translucent material is also available should more light be required within the dock.

CURTAIN MATERIAL

Both head and side curtains are heavy-duty 4mm thick PVC Derco black fabric specifically designed for robust use with dock shelter curtains. At the bottom of the side curtains a 100mm wide durable polypropylene flexible strip is welded to ensure integrity of side curtain return to original position.

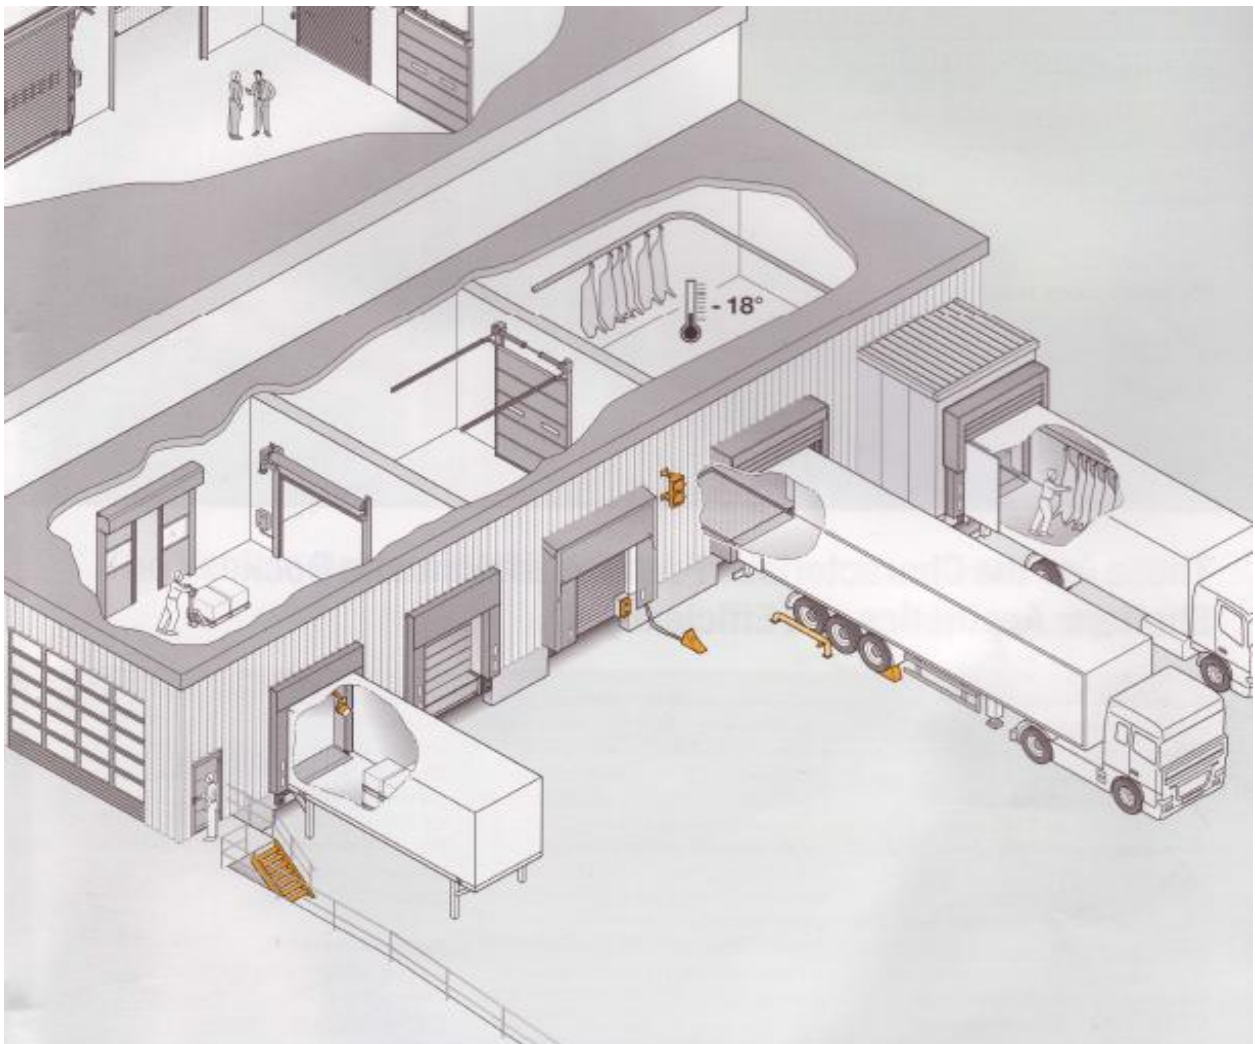

For windy positions a special aerolastic wind guy system is attached to the head curtain and fixed on the side frame to maintain curtain position.

The side curtains will have full-length safety yellow 100mm wide welded guide stripe to assist correct positioning for reversing vehicles.

All materials have full UV treatment for colourfast properties.
